

Added value in the data pool

Data from smart grids should be made usable for operational or external use. In order to maintain efficiency and effectiveness, standardised procedures are defined.

- Data for **urban functions** (e.g. energy zoning) are made available.
- Anonymised data are made available to **trusted app developers** – keyword: Smart City(zen).
- Internal **increase in efficiency and quality at grid operators**, since essential data is available at the right time in order to be able to make the right decisions

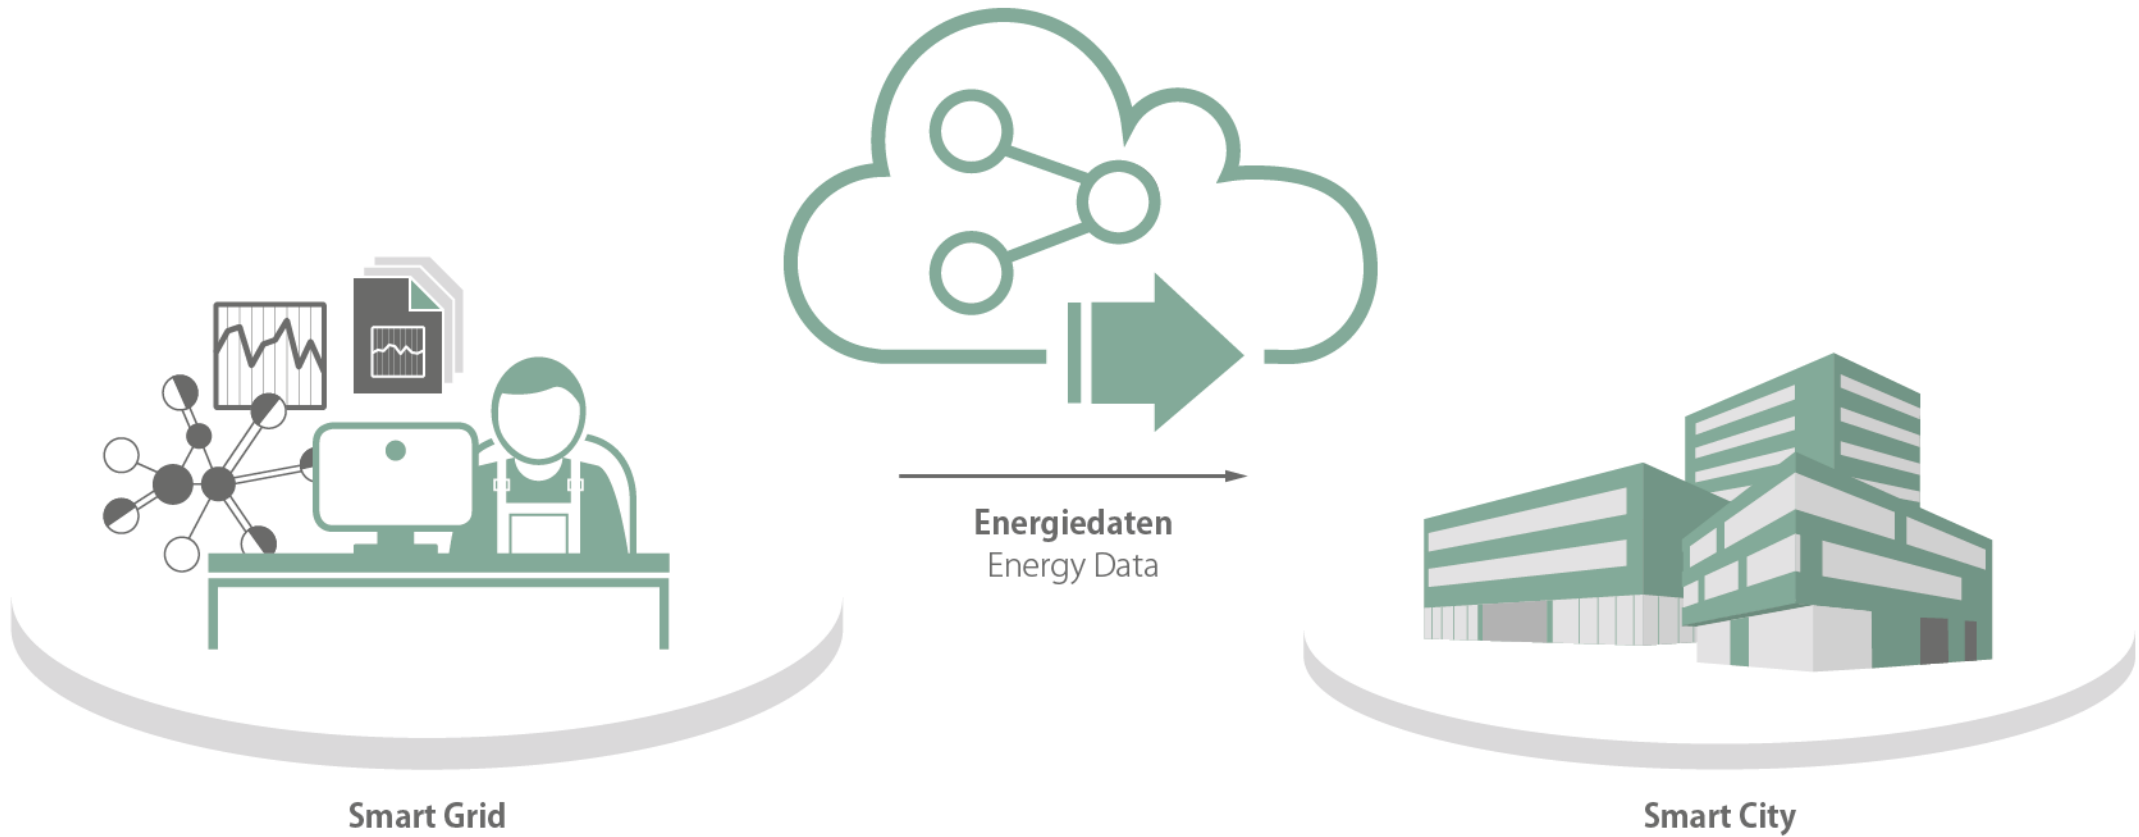

**Siemens, Wiener Netze,
Wien Energie**

Budget: 2 million Euro

Testbeds: Data from all
domains

Added value in the data pool

UC4

Added value in the data pool

UC4

The benefits:

- All grid-related data is collected and available in a central database
- Data can be used as the basis for services, for example: City Graph (free e-charging points are displayed)
